

## Blasting- painting

Our combination blasting and painting facility is designed as a space saving alternative to having separate blast room and painting rooms. This design offers substantial space and cost savings and is ideally suited for surface preparation, paint stripping and painting of large items, ie ship blocks, steel fabrications, rail cars, containers etc.

We are also doing water jet blasting.

We are backed with a team of experienced men to work under our guidance in the projects. They are high experience and experts in their respective domain. Our professionals include:

- Blaster
- Painter
- Quality engineer
- Supervisory personnel
